THE TIMES-VIRGINIAN

THE HOG THAT WILL NEVER GO TO MARKET

It's a hog you don't see in this country. Landrace is the breed, a wonderful bacon hog developed in Denmark.

The Danes were just about the very best farmers in the world. They were a thrifty people. Through their farm cooperatives they produced and marketed livestock and farm products of the finest quality.

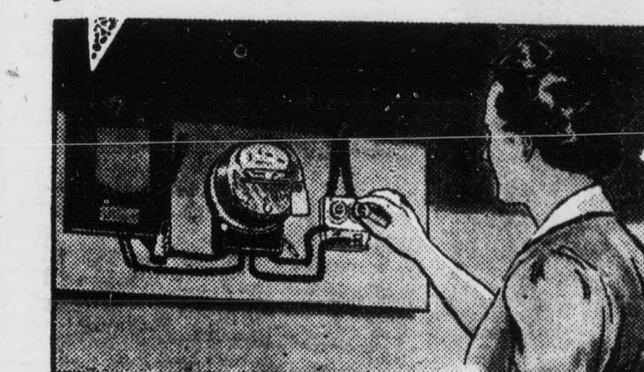

Successful and happy were these farmers—until one day the Germans came. They took the hog. They took all hogs. They took the butter and the cheese—and the cooperatives too. Like vultures they picked Denmark to the bone.

Remember this story as you market your livestock, crops and other farm produce. Remember it and put every dollar you can into U. S. War Bonds—every dollar you can.

Every dollar in Bonds that you can for your country and for yourself. Your Government needs that money now and you yourself are making a sound investment. The Bonds never depreciate in value. You get a third more than the original cost of the Bonds in ten years. You can always cash the Bonds after sixty days if you need the money. Buy now—at your bank or post office.

Know how Your Home Wiring Works

What To Do When A Fuse Blows

When electricity suddenly goes off in a part of your home or throughout, proceed as follows:

• See if your neighbor's lights are on. If they are, the chances are a fuse has "blown".

• Disconnect all appliances and lamps that were in use when the electricity went off.

• Go to your fuse box. Look at the fuse "windows". If the window is smudged or the metal rod inside is burned in two, that's the "blown" fuse.

• Stand on a dry surface, be sure hands are dry, pull the main switch to "off" (that cuts off all electricity and makes everything safe).

• Unscrew the blown fuse and replace it with one of proper size. Then, throw main switch to "on" position.

• Find the defective cord or appliance. Repair it. Don't overload any circuit. If the fuse continues to blow, call an electrician.

Most homes have one or more branch circuits. They lead from the meter to different parts of the home. If one burns out you can't get the wire to replace it if the others work.

That's why you should give your wiring system full protection. See that proper size fuses are used. The 15 amp is correct for most branch circuits—and each fuse controls one particular circuit.

Don't use too many lamps or appliances on one circuit. See that all cords, plugs and appliances are in good repair. Never repair unless the current is off. When in doubt, consult a competent electrician.

VIRGINIA PUBLIC SERVICE COMPANY

THE OLD JUDGE SAYS...

"I couldn't help overhearing you, Mary, when you asked Jim here why they let the liquor companies use sugar to make whiskey when all the rest of us have to cut down on it. I happen to know the answer to that. Industry never has used a single pound of sugar to make whiskey. The bootleggers were the only ones who used sugar to make whiskey. On top of that, there's not a single

largedistillery in the country making whiskey any more. They're all working day and night making war alcohol for the government for gunpowder, synthetic rubber, chemicals, and medical supplies.

"Just as I told Ed down at the courthouse this morning, the government simply wouldn't be able to get all this alcohol it needs in time if we didn't have these distilleries available and on the job."

Conference of Alcoholic Beverage Industries, Inc.
